

Subject: SIGG Bottles are 100% Safe

Date: October 23, 2007

On October 4th, the U.S. Consumer Products Safety Commission announced the recall of thousands of aluminum water bottles manufactured in China. The Commission took this action because these Chinese-made water bottles (deceptively branded as “Alpine Design”) contained excessive amounts of lead, violating the federal lead paint standard.

Since then, a few consumers have contacted SIGG Switzerland to ensure the safety of SIGG water bottles. I am pleased to report that SIGG Switzerland utilizes only food-grade, 100% safe paint in the manufacturing of our water bottles.

SIGG bottles absolutely do ***not*** contain any of the following harmful ingredients: antimony, arsenic, soluble barium, lead, cadmium, mercury and selenium. The paints used to decorate SIGG products are completely safe and in compliance with ASTM F963-2007.

As products like SIGG gain national media attention and increased sales, it’s very typical that lower priced, lower quality imitations hit the market. To assure that you are getting the finest quality and safest water bottle on the market, our best advice for consumers is:

Look for the SIGG brand name!

Since 1908, SIGG Switzerland has been manufacturing the highest quality water bottles in the world. SIGG and “Swiss Made” are synonymous with superb craftsmanship, world-class design and a never-ending attention to product quality & safety. You can count on SIGG.

Sincerely,

Steve Wasik
President
SIGG Switzerland (USA), Inc.
